

Essay on Rainy Season

The total six seasons in our country are summer, rain, winter, before winter, autumn, and spring which change every two months. According to the name of the seasons, the earth's ecosystem changes, one of which is the rainy season, which acts as a string across the universe.

During the rainy season, there is heavy and heavy rain, most of the time, there is rain that lasts for weeks. July is the commencement of the rainy season, which lasts through August.

RAINY TIME:

When the rainy season comes, there is joy and greenness all around, life is liberated by the scorching heat and the scorching heat.

During the rainy season, the children play hard and swim in their paper boat in the water & the farmer is also very happy for waving his harvest.

Freshly cut trees of dried forest trees are replanted during the rainy season. On the still, dark hills, a green sheet is spread out, and colorful flowers are visible everywhere. Rivers, lakes, ponds, dams, etc. Everything is filled with water, all the air is cold. Animals eat green grass and bird plants. The arrival of the rainy season is a key to the happiness of all living things on earth.

BENEFITS OF OPEN TIME:

All nature benefits from the rainy season, because of the rain, we can explain the great benefits of nature with its point below.

(1) FARMERS:

For farmers, the rainy season is not a blessing in disguise because, before the rainy season, farmers prepare weeds by planting weeds and compost in their fields. The farmer works all day long in extreme heat and keeps an eye on the sky to see when the clouds will come and water them.

Most farmers in our country only plant their crops in the rainy season. Also, read the Rainy Season Essay Conclusion.

(2) ENVIRONMENT:

The rainy season is very important for running our planet's ecological cycle smoothly, if not, then the entire ecosystem will collapse. There will be chaos everywhere, and it will be difficult to live on earth. Therefore, when the rains come, fodder water is available for animals, and water and other plants

are also available to humans. Earthly life also enters the environment. As a result, the rainy season is critical for the ecology.

(3) FAUNA - ANIMALS:

Due to the extreme heat, all trees, plants, and grass will dry up, and rivers and streams will dry up because the animals have nothing to eat and very little water to drink. But when the rainy season comes, then also the lack of water and food is eliminated, so the rainy season acts as nectar for animals.

(4) EXCLUSIVE WATER LEVEL RELEASE:

Due to extreme heat and humidity, groundwater vapor is rising and due to excessive exploitation of groundwater by humans, groundwater levels are declining as a result of which the earth remains warm and we cannot even drink healthy water.

When the rainy season comes, it is because of the rain when the groundwater level rises, as a result the earth's temperature also decreases and we get clean water.

(5) BUSINESS:

Our India is an agricultural country, so most of the income here comes from agriculture, so the year when the rains are not good, the prices of all things go up in that year and business slows down. When it rains well when farmers earn good money and come to the market to buy new things, which increases the business rapidly.

(6) Country Progress:

Even today, more than 70% of our country's income comes from agriculture, so many people in our country are still farmers. Therefore, whenever it rains a lot and the crop is good, there is progress in every kind of business. Because of this, everyone gets money to spend and everyone buys new things, which are starting to develop the country.

LOSS DUE TO RAIN:

There are some losses due to the rainy season, but due to the much work created by humans, their killing is obvious. The following are some of the major losses due to the rainy season -

(1) FLOOD:

As a result of heavy rains, flooding occurs due to crop failure and the loss of public resources, but floods also come from human activity because people harvest forest by which water flows faster. The loss of life is also due to people because people have made their habitat close to the rivers and have

set up their own flow due to the current flooding situation. When people live within their limits, a flood situation cannot take on such a dire situation.

(2) PERIOD DISEASES:

During the rainy season, seasonal diseases are very high, such as cholera, malaria, skin diseases, coughs, colds, etc., If we take care of the human environment then there will be no diseases because of the rainy season.

(3) EARTHLY CONTINUATION:

As a result of excessive rainfall, erosion begins, leaving fertile soil to flow. Unsuitable for nature and plants. The state of erosion is currently most pronounced because overgrown trees have been harvested by humans, which causes erosion, so I will have to plant more trees and prevent erosion. After the arrival of the rainy season, in India, there is a flow of festivals, in the same way, everyone finds happiness in the Indian rain and all nature is cold and attractive.

We celebrate the major festivals after the rainy season: Teej, Rakshabandhan, and Diwali, etc.

CONCLUSION:

Because of the rainy season, a wave of happiness runs through all of human life, and the rainy season acts as a beacon for the lives of all living beings on earth. The beautiful view of the orchard in the fields is very pleasing; by seeing the green all around, everyone gets peace of mind. Animals, birds are recounting their new raga, this is a very panoramic view of the phrase itself, and relief from intense heat due to the rainy season is unthinkable. We should also honor the rainy season by collecting water during the rainy season.
